The availability of machines and systems is heavily dependent on the maintenance of the machine technology. In order to ensure that the service life of the wear components is achieved despite maintenance being carried out, the correct selection and professional installation of the parts is necessary.

Since the core shooting machines are mostly robust designs that can achieve a long service life if properly maintained, overhauling old systems can also represent an alternative to buying new ones. KLANN Anlagentechnik therefore offers the professional overhaul of core shooting machines and the adaptation of the electrical control to the state of the art

As a manufacturer of core making equipment, KLANN offers service and maintenance for its own systems as well as systems from third-party manufacturers.

KLANN offers spare and wear parts suitable for core shooting machines from the following manufacturers:

- Vogel & Schemmann
- MAP
- Röper/Röperwerk

From its location in Schwerte in Germany, in the Ruhr area south of Dortmund, KLANN can offer fast and experienced help throughout Germany and neighbouring countries with its service team and appropriate service vehicles.

In collaboration with the customer, KLANN can design application-specific maintenance plans and minimize the inventory of spare and wearing parts through a framework agreement.
